Amazon Elastic Compute Cloud (EC2)

Create, manage, and monitor virtual servers in the cloud.

Amazon Elastic Compute Cloud (Amazon EC2) offers the broadest and deepest compute platform, with over 600 instance types and a choice of the latest processors, storage, networking, operating systems, and purchase models to help you best match the needs of your workload.

Select security group

The screenshot shows the 'Launch an instance' page in the AWS Management Console, specifically the 'Network settings' tab. The page is for the 'us-east-1' region. The 'Network' section shows the VPC ID 'vpc-0acec4191b0e04677'. The 'Subnet' section shows 'No preference (Default subnet in any availability zone)'. The 'Auto-assign public IP' is set to 'Enable'. The 'Firewall (security groups)' section has two radio buttons: 'Create security group' (unselected) and 'Select existing security group' (selected). A green arrow points from the 'Select existing security group' button to a dropdown menu. The dropdown menu shows 'default sg-0a907ec34ed3e8f0a' with a blue 'X' icon. Below the dropdown is the text 'VPC: vpc-0acec4191b0e04677'. To the right of the dropdown is a link 'Compare security group rules'. On the right side of the page, the 'Summary' section shows 'Number of instances' as '1', 'Software Image (AMI)' as 'Canonical, Ubuntu, 24.04, amd64...', 'Virtual server type (instance type)' as 't3.micro', and 'Firewall (security group)' as 'default'. At the bottom of the 'Summary' section are buttons for 'Cancel', 'Launch instance', and 'Preview code'. The bottom of the screenshot shows the Windows taskbar with various icons and the system clock showing 23:10 on 06-02-2026.

Launch instance

The screenshot shows the 'Launch an instance' page in the AWS Management Console, specifically the 'Summary' tab. The page is for the 'us-east-1' region. The 'Configure storage' section on the left shows '1x 8 GiB gp3' with a dropdown menu. Below this is a button 'Add new volume'. A message states: 'The selected AMI contains instance store volumes, however the instance does not allow any instance store volumes. None of the instance store volumes from the AMI will be accessible from the instance'. Below this is a link 'Click refresh to view backup information' and a note: 'The tags that you assign determine whether the instance will be backed up by any Data Lifecycle Manager policies.' At the bottom of the 'Configure storage' section is a button 'Edit'. On the right side of the page, the 'Summary' section shows 'Number of instances' as '1', 'Software Image (AMI)' as 'Canonical, Ubuntu, 24.04, amd64...', 'Virtual server type (instance type)' as 't3.micro', and 'Firewall (security group)' as 'default'. At the bottom of the 'Summary' section are buttons for 'Cancel', 'Launch instance', and 'Preview code'. A green arrow points from the 'Launch instance' button to the right. The bottom of the screenshot shows the Windows taskbar with various icons and the system clock showing 23:12 on 06-02-2026.

ModifyInboundSecurityGroupRules

us-east-1.console.aws.amazon.com/ec2/home?region=us-east-1#ModifyInboundSecurityGroupRules:securityGroupId=sg-0a907ec34ed3e8f0a

Search [Alt+S]

United States (N. Virginia) Admin

EC2 > Security Groups > sg-0a907ec34ed3e8f0a - default > Edit inbound rules

Edit inbound rules

Inbound rules control the incoming traffic that's allowed to reach the instance.

Security group rule ID	Type	Protocol	Port range	Source	Description - optional
-	All traffic	All	All	An... 0.0.0.0/0	

Add rule

Rules with source of 0.0.0.0/0 or ::/0 allow all IP addresses to access your instance. We recommend setting security group rules to allow access from known IP addresses only.

Cancel Preview changes Save rules

Connect to instance | EC2 | us-east-1

us-east-1.console.aws.amazon.com/ec2/home?region=us-east-1#ConnectToInstance:instanceId=i-0f715d4e78c14a008

EC2 > Instances > i-0f715d4e78c14a008 > Connect to instance

EC2 Instance Connect SSM Session Manager **SSH client** EC2 serial console

Instance ID
i-0f715d4e78c14a008 (Example-Sever)

1. Open an SSH client.
2. Locate your private key file. The key used to launch this instance is server-key.pem
3. Run this command, if necessary, to ensure your key is not publicly viewable.
chmod 400 "server-key.pem"
4. Connect to your instance using its Public DNS:
ec2-98-82-139-250.compute-1.amazonaws.com

Example:
ssh -i "server-key.pem" ubuntu@ec2-98-82-139-250.compute-1.amazonaws.com

Note: In most cases, the guessed username is correct. However, read your AMI usage instructions to check if the AMI owner has changed the default AMI username.

Phase 1: Creating the Ubuntu EC2 Instance

First, we need to provision the virtual server in the AWS Cloud.

- 🔧 **Log in to AWS:** Go to the [AWS Management Console](#) and navigate to the **EC2 Dashboard**.
- 🔧 **Region:** Selected region
- 🔧 **Launch Instance:** Click the orange "**Launch instance**" button.
- 🔧 **Name and Tags:** Enter a server name. (Example-Server).
- 🔧 **Application and OS Images (AMI):** Select **Ubuntu**.
- 🔧 **Instance Type:** Select **t3.micro** (depending on your region's free tier).
- 🔧 **Key Pair:** Click "**Create new key pair**".
- 🔧 **Key pair name:** (sever-key)
- 🔧 **Key pair type:** RSA.
- 🔧 **Private key file format:** Choose **.pem** for use MobaXterm.
- 🔧 **Download and Save:** Keep this file safe in Desktop folder, cannot download it again.
- 🔧 **Network Settings:** Select existing security group.
- 🔧 **Launch:** Click "**Launch instance**"
- 🔧 **Security group Inbound rules:** **Type:** Select **All traffic** & **Source:** Select **Anywhere-IPv4** (this will show as 0.0.0.0/0).

Phase 2: Connecting via MobaXterm

Setting Key Permissions & Connecting

- ✚ **Open MobaXterm:** Launch the application.
- ✚ **Navigate to Desktop:** Go to your key pair's location: `cd /home/mobaxterm/Desktop/Key-pair`
- ✚ **Verify File:** Type `ls` to ensure you see *sever-key.pem* in the list.
- ✚ **Apply Read Permission:** Paste the following command to lock the key: **`chmod 400 sever-key.pem`**
- ✚ **Connect to Server:** Copy the SSH string from: **`ssh -i "sever-key.pem" ubuntu@ec2-92-82-139-250.compute-1.amazonaws.com`**
- ✚ **Connected:** Showing `Ubuntu@ip-172-31-69-178:~$`
